The Formentera Council's Office of Environment will launch an information service for residents interested in applying for renewable energy assistance from the Govern Balear. Applications are open to businesses, associations and individuals who wish to receive government money for photovoltaic (solar) energy.

Starting Monday, June 6, the general public can visit or call the CiF's Office of Environment (971321210) for application details.

The Govern Balear has recently announced the availability of two grants. The first, for which the regional government in Palma has earmarked 200,000 euros, is for businesses and business associations that use solar energy for self-supply. The other grant, with similar terms and a 250,000-euro budget, is for individuals and groups of property owners.
