

In a bid to bring fibre optic service to the neighbourhood of ses Bardetes, the Formentera Council's Office of Mobility reports that from Thursday, February 8, upgrades will be undertaken at the crossing of avenues Isidor Macabich and Vuit d'Agost. The work means vehicle traffic along avinguda Isidor Macabich will be interrupted, if only partially, over the weekend from Friday afternoon when school lets out.

Mobility secretary Rafael González warned of noise pollution during construction and apologised to area residents for the inconvenience, though he explained it was a necessary part of the effort to equip ses Bardetes for fibre optic connections.

Traffic control

With one of avinguda Isidor Macabich's two lanes blocked, special signage will be used to ensure continued traffic flow in both directions and minimise inconveniences to drivers.
